

Cloud migration

Helping you move your database environment to the right type of cloud, with ongoing support

Service overview

We help organisations in their digital transformation journey. Whether you're moving fully to a public cloud platform or require a hybrid solution, our support covers every stage. We bring two decades of independent expertise to your project. We're specialists in database technologies and their dependent applications and systems. We've worked in the cloud since its advent and are an accredited partner to leading providers.

Our in-depth knowledge and collaborative approach ensure your move meets your current and future needs. You benefit not just from a database consultant and cloud solution architect, but an integrated team. The support you receive is from experts and engineers who fully understand your issues and your database environment. The result is a resilient, secure, high performing cloud solution, while lowering your IT overheads.

How we help

We'll help you cover your key cloud considerations. You'll have the understanding to make an informed decision, knowing the infrastructure is in place for your requirements. We support by:

- evaluating existing compute, storage and database needs and workloads to develop a secure, cost-effective strategy
- presenting cloud options alongside clear performance and cost comparisons
- meeting compliance and risk management needs
- planning your cloud migration, including workload assignment
- conducting compatibility tests and trialing migrations
- migrating databases and dependent applications and systems for all your users
- repurposing or retiring existing, on-site infrastructure
- training your staff to manage the new cloud environment and providing ongoing support, as needed.

DATABASES SUPPORTED

Oracle, SQL Server, MySQL, Sybase, MS Access and PostgreSQL

We can help move your operations to a range of public cloud platforms, including Microsoft Azure, Amazon Web Services (AWS) and Oracle Cloud.

“ ”

Without outside help, we would never have known how to implement Azure or get the most out of all it has to offer. Thanks to WellData for their invaluable input.

**Managing Director,
Recruitment Sector**

How this works for you

We work as part of your project team to help you select, plan, implement and run your new cloud environment. There are four main stages to your successful cloud migration.

- 1 Project understanding and evaluation**
 We carry out an in-depth review of your database migration requirements, dependent applications and systems and future plans to establish clear project objectives. This understanding enables us to independently recommend the right cloud solutions, so you can make an informed decision.
- 2 Planning and scheduling**
 We'll talk you through the proposed solutions, the associated costs and project timings for your approval. We'll then plan your cloud migration for all your users, setting out clear milestones and key deliverables.
- 3 Migrating to the cloud**
 Our team will work closely with you to deliver the project with minimum business interruption. We can cover as much or as little of the move as you like.
- 4 Ongoing support**
 Following successful migration, our technical team is here to support you 24/7.

Everything we do will be detailed in a robust statement of works, giving you a guarantee of service excellence, deliverables and complete peace of mind.

Here to help you

Key benefits

Clients in the public and private sector benefit from our database solutions.

Highly qualified and accredited database specialists

The information needed to make the right cloud decisions

Cost-efficient, secure migration, from planning to daily operations

Out-of-hours implementation to minimise any disruption

Optimised cloud database environment, with long-term savings

Automatic scaling up or down to meet changing demand

Highly competitive service – no hidden extras

Ongoing technical support
