

# Database consolidation

Streamline your database environment,  
maximising control while minimising costs

## Service overview

Maintaining the databases behind your organisation's operations can be complicated and costly, especially when infrastructure has grown over time. The solution is to consolidate the entire environment. We can help you initiate and implement streamlining, bringing two decades of expertise across database technologies, dependent applications and related systems to your project. We are an accredited partner to leading industry providers and meet ISO and government standards.

Our in-depth database knowledge and close, collaborative approach ensure greater efficiencies all-round, while maintaining high levels of reliability and performance.

## How we help

Our service enables a range of organisations to:

- regain control of their database environment
- reduce the number of database-related issues, as well as patching and updating requirements
- minimise licensing, hardware and utility costs
- maximise available database space and improve the agility of IT infrastructure
- optimise performance of databases and dependent applications and systems
- deliver environmentally friendly IT operations.

Exactly what we needed:  
a detailed report on  
our consolidation and  
upgrade options along  
with clear licensing cost  
savings.

**IT Manager,  
NHS Trust**

## How this works for you

An experienced WellData consultant will work alongside you, supported by our database engineers and wider team of specialists. While each organisation's IT is unique, there are three main steps to our consolidation service.

- 1 Discovery workshop, analysis and review**  
 We carry out an in-depth strategic and technical review of your database environment with project stakeholders. This will help us to understand the current architecture, system deployments and main issues and risks. We'll undertake a gap analysis to identify new or improved requirements, consider maintenance, security and data recovery in detail and discuss project timings and future goals with you. We'll analyse current database load statistics and use the latest tools to establish performance statistics for memory, processing, storage and other key areas.
- 2 Design and documentation**  
 We'll develop a new, consolidated database architecture and solution, alongside associated costs, any licensing arrangements and a schedule of project timings. Your full report will include our findings, recommendations and options, taking careful consideration of all core aspects.
- 3 Solution presentation**  
 We'll present your consolidation solution, either at your offices or remotely, making our findings, recommendations and next steps clear. Our approach will minimise any business interruption, while meeting your project's objectives.

**Everything we do will be detailed in a robust statement of works, giving you a guarantee of service excellence, deliverables and complete peace of mind.**

### Key benefits

- Clients in the public and private sector benefit from our database solutions.

✓
- Highly qualified and accredited database specialists

✓
- Tried-and-tested approach, maximising investment

✓
- Reduced IT overheads and risks

✓
- Optimised, high-performing database environment

✓
- Highly competitive service

✓
- Ongoing technical support
