

Database consultancy

Hands-on solutions from database specialists,
delivered cost-efficiently

Service overview

We can support your new database project, resolve a current issue, help maximise your ongoing IT investment or assist as you keep pace with change. From strategic database advice to performance monitoring and optimisation, we bring two decades of expertise to your organisation, across a breadth of technologies and dependent applications and systems. We are also an accredited partner to leading industry providers and work to ISO and government standards.

You benefit not just from a highly-qualified database consultant, but an integrated team. The consultancy you receive is from engineers who fully understand your issues and environment; experts who give you practical advice and recommendations.

For our clients, the result is a resilient, secure database environment that's high performing, highly available and aligned with your organisation and its ambitions. And we always look to reduce costs, making our consultancy highly competitive too.

How we help

We can work as part of your IT team or act entirely on your behalf. We support a range of database requirements, including:

- project and new system planning
- database design, future proofing and installation
- database audits to identify weaknesses and potential risks
- database, server and system consolidation
- robust disaster recovery solutions
- optimised database tuning and performance
- upgrades and cloud migrations.

22,000+

DATABASES SUPPORTED

Oracle, SQL Server, MySQL,
Sybase, MS Access and
PostgreSQL

How this works for you

Each consultancy project is unique and delivered in the most cost-efficient way, both face to face and, where appropriate, remotely.

There are three main stages.

- 1 Project briefing**
An in-depth review of your database requirements and existing IT systems to establish clear project objectives.
- 2 Solution and scheduling**
We'll talk you through the proposed solution, the associated costs and timings for your approval. The project will be broken down into clear milestones and key deliverables.
- 3 Implementation**
Our consultant and team will work closely with your IT or project people to deliver with minimum business interruption.

Everything we do will be detailed in a robust statement of works, giving you a guarantee of service excellence, deliverables and complete peace of mind.

Database consultancy is part of our all-inclusive contracts

Any consultancy fees are automatically covered for our comprehensive support customers with our all-inclusive contract.
